OUR MISSION

Our goal at A&M Roofing Contractors is to extend the life of your commercial roof at any point in the life cycle, and to reduce unnecessary costs. We have excellent regional service for us no initiative is too big or too small!

In recent years we have progressed more than 60 percent and are still launching new sites throughout the United States.

Our winning formula is simple: good consistency, focus on reliability, excellent customer service at the best price possible. That is why not only our customers but even our competitors consider us one of the best Roofing Experts in New Jersey & New York, USA.

OUR SERVICES

- ▶ Industrial Roofing
- ▶ Residential Roofing
- ▶ Commercial Roofing

INDUSTRIAL ROOFING

A professional Industrial Roofing service provider will request to visit your site or the building whose roof needs to be installed prior to any commitment or billing. This visit will actually be the starting point of their service. The roofing specialists will analyze your site and measure the specifications according to their convenience.

INDUSTRIAL TOP ROOFING

Polypropylene and ethylene-propylene rubber compose this single-ply roofing membrane known as thermoplastic polyolefin. It delivers exceptional insulation, which lowers energy bills in exchange. The UV and heat tolerant EPDMs and TPOs are. In a completely adhered device, TPO is normally installed, allowing the white layer to stay exposed.

INDUSTRIAL ROOFING EPD

A form of a synthetic fiber known as the terpolymer of Ethylene Diene propylene. It's ideal and comes on a wide roll for flat roofs and low slope roof designs. EPDM is completely adhered, physically connected, or ballasted and seams with liquid adhesives are sealed. These synthetic rubbers are lightweight, giving your roof a water-tight seal, and do not need heating during construction. Compared to other materials, they are simpler and quicker to install, however, sadly, their installation is very pricey. It would fall apart easily if not mounted by a professional roofer.

RESIDENTIAL ROOFING

We are the best Residential Roofing Contractor in New Jersey, established partnership programs in order to ensure collaborative success with building owners, developers, general contractors, and businesses. Simplified, streamlined budgeting, planning, monitoring, security, and customer service proceedings, to help meet all their roofing needs, we are proud to provide our clients with the highest level roofing services. No job is too big or too small, whether it be a simple repair, maintenance, or a roofing installation!

RESIDENTIAL ROOFING OVER SHINGLES

Shingles are lightweight and can function on almost any form of roofing. They are available in a variety of designs and colors, making it easier to become a reality for your dream home aesthetic. The products used to make shingles provide better value at a lower cost, making this a cost-effective and energy-efficient alternative for your house. By being robust, lasting up to 20 years, Shingles save you money and are easy to mount.

RESIDENTIAL ROOFING WITH TILES

Roofing tiles in different colors and shapes are available. It is not surprising, that the roof tiles are long-lasting and energy-efficient, generally made from fire resistant clay or concrete. They can last between 20 and 25 years, although they are a more costly option.

FLAT MEMBRANE ROOFING

Although flat membrane roofs are historically seen on commercial buildings, it is becoming increasingly common among flat-roofed residential owners. A list of advantages includes longevity and resistance to outside elements, burning, and chemicals are given to flat membrane roofing. Materials used to build this roofing alternative are often environmentally sustainable for anything between 20 and 30 years.

COMMERCIAL ROOFING

We are the best Commercial Roofing Contractor. The building's roof is one feature that many people miss. It is important to mount, maintain and restore commercial roofing, as this has a huge effect on the structural integrity of the building. We typically equate a roof with residential homes over our heads, but roofs are equally vital to maintain a business.

Commercial roofs, particularly in Florida, receive the brunt face of the elements. As the roofs are vulnerable to inclement weather such as strong winds, torrential rain, and excessive temperatures, this is our first line of defense. We are the best Commercial Roofing Contractors.

THE ROOFS WE CONSTRUCT AS COMMERCIAL ROOFING CONTRACTORS

At A&M Roofing Contractors, we have qualified Commercial Roofing Contractor to offer comprehensive services as per the varied needs of our customers. We have the expertise, experience, and resources to help install and maintain all types of commercial roofing systems. Whether you need a commercial roof inspection, maintenance, repair, replacement, or any other services, we can help. Commercial roofing systems are typically made up of single-ply (TPO, PVC, EPDM), concrete, modified bitumen, built-up roofing system, tar and gravel, and more.

1.BUILT-UP

These are common for commercial buildings, also called gravel roofs, as they can suit wide or small areas and provide outstanding protection against the elements.

2.MODIFIED BITUMEN

Fiber or rubber modified asphalt provides a robust roof that fits well for low-slope or flat roofs.

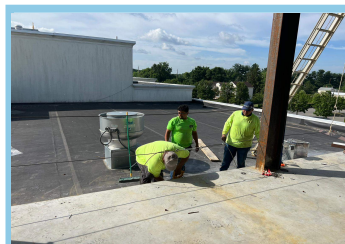

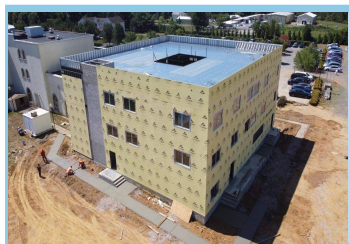

3.SINGLE PLY

Since they are built in a single layer and do not require asphalt, these durable roofs are the easiest to build.
